Red Hat, Red Hat Enterprise Linux, the Shadowman logo, the Red Hat logo, JBoss, OpenShift, Fedora, the Infinity logo, and RHCE are trademarks of Red Hat, Inc., registered in the United States and other countries.

Linux[®] is the registered trademark of Linus Torvalds in the United States and other countries.

Java[®] is a registered trademark of Oracle and/or its affiliates.

XFS[®] is a trademark of Silicon Graphics International Corp. or its subsidiaries in the United States and/or other countries.

MySQL[®] is a registered trademark of MySQL AB in the United States, the European Union and other countries.

Node.js[®] is an official trademark of Joyent. Red Hat is not formally related to or endorsed by the official Joyent Node.js open source or commercial project.

The OpenStack[®] Word Mark and OpenStack logo are either registered trademarks/service marks or trademarks/service marks of the OpenStack Foundation, in the United States and other countries and are used with the OpenStack Foundation's permission. We are not affiliated with, endorsed or sponsored by the OpenStack Foundation, or the OpenStack community.

All other trademarks are the property of their respective owners.

Abstract

The Release Notes for .NET 6.0 containers provide high-level coverage of the features and functionality that comprise the .NET 6.0 platform and document known problems in this release.

MAKING OPEN SOURCE MORE INCLUSIVE	3
PROVIDING FEEDBACK ON RED HAT DOCUMENTATION	4
CHAPTER 1. NEW FEATURES	5
CHAPTER 2. KNOWN ISSUES	6

MAKING OPEN SOURCE MORE INCLUSIVE

Red Hat is committed to replacing problematic language in our code, documentation, and web properties. We are beginning with these four terms: master, slave, blacklist, and whitelist. Because of the enormity of this endeavor, these changes will be implemented gradually over several upcoming releases. For more details, see [our CTO Chris Wright's message](#).

PROVIDING FEEDBACK ON RED HAT DOCUMENTATION

We appreciate your input on our documentation. Please let us know how we could make it better. To do so:

- For simple comments on specific passages:
 1. Make sure you are viewing the documentation in the *Multi-page HTML* format. In addition, ensure you see the **Feedback** button in the upper right corner of the document.
 2. Use your mouse cursor to highlight the part of text that you want to comment on.
 3. Click the **Add Feedback** pop-up that appears below the highlighted text.
 4. Follow the displayed instructions.
- For submitting more complex feedback, create a Bugzilla ticket:
 1. Go to the [Bugzilla](#) website.
 2. As the Component, use **Documentation**.
 3. Fill in the **Description** field with your suggestion for improvement. Include a link to the relevant part(s) of documentation.
 4. Click **Submit Bug**.

CHAPTER 1. NEW FEATURES

The Release Notes for .NET 6.0 containers is an extension of the Release Notes for .NET 6.0 RPM packages. See [Release Notes for .NET 6.0 RPM packages](#) for information about known issues, the operating system architecture, privacy, and support.

CHAPTER 2. KNOWN ISSUES

1. **ReadyToRun**, which is enabled on a source-to-image build via the **DOTNET_PUBLISH_READYTORUN** environment variable, is not supported on **s390x**. The build will print a warning and ignore this variable.
2. The SDK image contains nodeJS to support building JavaScript front-ends in tandem with the .NET backend. Some JavaScript web front-ends cannot be built on **s390x** due to missing nodeJS packages.
3. .NET 6.0 on **s390x** does not understand memory and cpu limits in containers. In such environments, it is possible that .NET 6.0 will try to use more memory than allocated to the container, causing the container to get killed or restarted in OpenShift Container Platform. As a workaround you can manually specify a heap limit through an environment variable: **MONO_GC_PARAMS=max-heap-size=<limit>**. You should set the limit to 75% of the memory allocated to the container. For example, if the container memory limit is 300MB, set **MONO_GC_PARAMS=max-heap-size=225M**.

See [Known Issues](#) in the .NET 6.0 Release Notes for .NET 6.0 RPM packages for a list of known issues and workarounds for RPMs.
