OpenJDK 11

Configuring OpenJDK 11 for Windows
OpenJDK 11 Configuring OpenJDK 11 for Windows
Abstract

OpenJDK 11 for Windows is a Red Hat offering on the Microsoft Windows platform. The Getting Started with OpenJDK 11 for Windows guide provides an overview of this product and explains how to configure the software.

MAKING OPEN SOURCE MORE INCLUSIVE

Red Hat is committed to replacing problematic language in our code, documentation, and web properties. We are beginning with these four terms: master, slave, blacklist, and whitelist. Because of the enormity of this endeavor, these changes will be implemented gradually over several upcoming releases. For more details, see our CTO Chris Wright’s message.
PROVIDING FEEDBACK ON RED HAT DOCUMENTATION

We appreciate your feedback on our documentation. To provide feedback, you can highlight the text in a document and add comments.

This section explains how to submit feedback.

Prerequisites

- You are logged in to the Red Hat Customer Portal.
- In the Red Hat Customer Portal, view the document in Multi-page HTML format.

Procedure

To provide your feedback, perform the following steps:

1. Click the Feedback button in the top-right corner of the document to see existing feedback.

   NOTE
   The feedback feature is enabled only in the Multi-page HTML format.

2. Highlight the section of the document where you want to provide feedback.

3. Click the Add Feedback pop-up that appears near the highlighted text.
   A text box appears in the feedback section on the right side of the page.

4. Enter your feedback in the text box and click Submit.
   A documentation issue is created.

5. To view the issue, click the issue tracker link in the feedback view.
CHAPTER 1. SELECTING A SPECIFIC OPENJDK FROM THE INSTALLED VERSIONS FOR AN APPLICATION

You can select a specific OpenJDK from the installed versions on Microsoft Windows for an application.

Prerequisites

- More than one OpenJDK is already installed on the system.

Procedure

1. Log in as a Windows system administrator.
2. On the command line, set the prompt to `C:/`.
3. Enter `dir /b /s java.exe` to list all of the installed OpenJDKs on the system.
4. Set the value of the environment variable to your OpenJDK (or JRE) installation path:
   ```
   setx -m JAVA_HOME "Path to Java"
   
   If the path contains spaces, use the shortened path name.
   
   5. Restart Command Prompt to reload the environment variables.
   
   6. Retrieve the value of the path variable:
      ```
      echo %JAVA_HOME%
      ```
   
   7. Set the value of path variable:
      ```
      setx -m PATH "%PATH%;%JAVA_HOME%\bin";
      ```
CHAPTER 2. SETTING MISSION CONTROL FOR OPENJDK 11 FOR WINDOWS

This procedure describes how to install and set Mission Control for OpenJDK 11 for Windows.

Prerequisites

- OpenJDK 11 for Windows is installed on the system.

Procedure

1. Extract the archive.

2. In the **Mission Control** directory, open the JMC client executable file.

3. On the command line, start the JMC client by entering `jmc` or the full path to the JMC executable.

   ```batch
   JAVA_HOME\missioncontrol\jmc.exe
   ```

4. On the JMC Client screen, create a new connection from the File menu, choose your JVM, and start JMX console.

As the result, you should be getting an overview page with Processors, Memory consumption, Java heap use, JVM CPU usage, etc.
CHAPTER 3. CONFIGURING OPENJDK TO RUN WITH CUSTOMIZED HEAP SIZE

OpenJDK 11 for Windows can be configured to use a customized heap size.

Prequisites

- Installed Java Runtime

Procedure

1. Run the application by adding maximum heap size option to your java command line. For example to set the maximum heap size to 100 megabytes use the `-Xmx100m` option.

```
$ java -Xmx100m <your-main-class>
```
