Red Hat Enterprise Virtualization 3.6 Introduction to the Administration Portal

Accessing and Using the Administration Portal

Red Hat Enterprise Virtualization Documentation Team

CHAPTER 1. USING THE ADMINISTRATION PORTAL

1.1. BROWSER AND CLIENT REQUIREMENTS

The following browser versions and operating systems can be used to access the Administration Portal and the User Portal.

Browser support is divided into tiers:

- **Tier 1**: Browser and operating system combinations that are fully tested and fully supported. Red Hat Engineering is committed to fixing issues with browsers on this tier.

- **Tier 2**: Browser and operating system combinations that are partially tested, and are likely to work. Limited support is provided for this tier. Red Hat Engineering will attempt to fix issues with browsers on this tier.

- **Tier 3**: Browser and operating system combinations that are not tested, but may work. Minimal support is provided for this tier. Red Hat Engineering will attempt to fix only minor issues with browsers on this tier.

</tbody>
</table>

Virtual machine consoles can only be accessed using supported Remote Viewer (virt-viewer) clients on Red Hat Enterprise Linux and Windows. To install virt-viewer, see Installing Supported Components in the Virtual Machine Management Guide. Installing virt-viewer requires Administrator privileges.

SPICE console access is only available on other operating systems, such as OS X, through the unsupported SPICE HTML5 browser client.

Supported QXL drivers are available on Red Hat Enterprise Linux machines, Windows XP and Windows 7 machines.
SPICE support is divided into tiers:

- **Tier 1**: Operating systems on which remote-viewer has been fully tested and is supported.
- **Tier 2**: Operating systems on which remote-viewer is partially tested and is likely to work. Limited support is provided for this tier. Red Hat Engineering will attempt to fix issues with remote-viewer on this tier.

</tr>
</tbody>
</table>

### 1.2. GRAPHICAL USER INTERFACE ELEMENTS

The Red Hat Enterprise Virtualization Administration Portal consists of contextual panes and menus and can be used in two modes - tree mode, and flat mode. Tree mode allows you to browse the object hierarchy of a data center while flat mode allows you to view all resources across data centers in a single list.

Figure 1.1. Key Graphical User Interface Elements
Key Graphical User Interface Elements

1. **Header**

   The header bar contains the name of the currently logged in user, the **Sign Out** button, the **About** button, the **Configure** button, and the **Guide** button. The **About** shows information on the version of Red Hat Enterprise Virtualization, the **Configure** button allows you to configure user roles, and the **Guide** button provides a shortcut to the *Red Hat Enterprise Virtualization Administration Guide*.

2. **Search Bar**

   The search bar allows you to build queries for finding resources such as hosts and clusters in the Red Hat Enterprise Virtualization environment. Queries can be as simple as a list of all the hosts in the system, or more complex, such as a list of resources that match certain conditions. As you type each part of the search query, you are offered choices to assist you in building the search. The star icon can be used to save the search as a bookmark.

3. **Resource Tabs**

   All resources can be managed using their associated tab. Moreover, the **Events** tab allows you to view events for each resource. The Administration Portal provides the following tabs: **Data Centers**, **Clusters**, **Hosts**, **Networks**, **Storage**, **Disks**, **Virtual Machines**, **Pools**, **Templates**, **Volumes**, **Users**, and **Events**, and a **Dashboard** tab if you have installed the data warehouse and reports.

4. **Results List**

   You can perform a task on an individual item, multiple items, or all the items in the results list by selecting the items and clicking the relevant action button. Information on a selected item is displayed in the details pane.

5. **Details Pane**

   The details pane shows detailed information about a selected item in the results list. If no items are selected, this pane is hidden. If multiple items are selected, the details pane displays information on the first selected item only.

6. **System/Bookmarks/Tags Pane**

   The system pane displays a navigable hierarchy of the resources in the virtualized environment. Bookmarks are used to save frequently used or complicated searches for repeated use. Bookmarks can be added, edited, or removed. Tags are applied to groups of resources and are used to search for all resources associated with that tag. The System/Bookmarks/Tags Pane can be minimized using the arrow in the upper right corner of the panel.

7. **Alerts/Events Pane**

   The **Alerts** tab lists all high severity events such as errors or warnings. The **Events** tab shows a list of events for all resources. The **Tasks** tab lists the currently running tasks. You can view this panel by clicking the maximize/minimize button.
### Refresh Rate

The refresh rate drop-down menu allows you to set the time, in seconds, between Administration Portal refreshes. To avoid the delay between a user performing an action and the result appearing in the portal, the portal will automatically refresh upon an action or event regardless of the chosen refresh interval. You can set this interval by clicking the refresh symbol in top right of the portal.

### 1.3. TREE MODE AND FLAT MODE

The Administration Portal provides two different modes for managing your resources: tree mode and flat mode. Tree mode displays resources in a hierarchical view per data center, from the highest level of the data center down to the individual virtual machine. Working in tree mode is highly recommended for most operations.

![Tree Mode](image)

**Figure 1.2. Tree Mode**

Flat mode allows you to search across data centers, or storage domains. It does not limit you to viewing the resources of a single hierarchy. For example, flat mode makes it possible to find all virtual machines that are using more than 80% CPU across clusters and data centers, or locate all hosts that have the highest utilization. In addition, certain objects, such as Pools and Users are not in the data center hierarchy and can be accessed only in flat mode.

To access flat mode, click on the System item in the Tree pane on the left side of the screen. You are in flat mode if the Pools and Users resource tabs appear.
1.4. USING THE GUIDE ME FACILITY

When setting up resources such as data centers and clusters, a number of tasks must be completed in sequence. The context-sensitive Guide Me window prompts for actions that are appropriate to the resource being configured. The Guide Me window can be accessed at any time by clicking the Guide Me button on the resource toolbar.
1.5. PERFORMING SEARCHES IN RED HAT ENTERPRISE VIRTUALIZATION

The Administration Portal enables the management of thousands of resources, such as virtual machines, hosts, users, and more. To perform a search, enter the search query (free-text or syntax-based) into the search bar. Search queries can be saved as bookmarks for future reuse, so you do not have to reenter a search query each time the specific search results are required. Searches are not case sensitive.

1.6. SAVING A QUERY STRING AS A BOOKMARK

A bookmark can be used to remember a search query, and shared with other users.

Procedure 1.1. Saving a Query String as a Bookmark

1. Enter the desired search query in the search bar and perform the search.

2. Click the star-shaped **Bookmark** button to the right of the search bar to open the **New Bookmark** window.

3. Enter the **Name** of the bookmark.

4. Edit the **Search string** field (if applicable).

5. Click **OK** to save the query as a bookmark and close the window.

6. The search query is saved and displays in the **Bookmarks** pane.

You have saved a search query as a bookmark for future reuse. Use the **Bookmark** pane to find and select the bookmark.
APPENDIX A. REVISION HISTORY

Revision 3.6-5  Fri 07 Oct 2016  
BZ#1331634 - Updated browser and client requirements.

Revision 3.6-4  Mon 22 Feb 2016  
Initial revision for Red Hat Enterprise Virtualization 3.6.

Revision 3.6-3  Wed 2 Dec 2015  
BZ#1188222 - Updated the browser support matrix.

Revision 3.6-2  Wed 18 Nov 2015  
Final revision for Red Hat Enterprise Virtualization 3.6 beta.

Revision 3.6-1  Wed 11 Nov 2015  
Initial creation for the Red Hat Enterprise Virtualization 3.6 release.
