Welcome to the Red Hat JBoss Core Services version 2.4.37 Service Pack 9 release.

Red Hat JBoss Core Services Apache HTTP Server is an open source web server developed by the Apache Software Foundation. Features of Apache HTTP Server include:

- Implements the current HTTP standards, including HTTP/1.1 and HTTP/2.
- Transport Layer Security (TLS) encryption support though OpenSSL, providing secure connections between the web server and web clients.
- Extendable though modules, some of which are included with the Red Hat JBoss Core Services Apache HTTP Server.

IMPORTANT

Red Hat Enterprise Linux 6 is no longer supported and subsequently was removed from the documentation.
PROVIDING FEEDBACK ON RED HAT DOCUMENTATION

We appreciate your feedback on our technical content and encourage you to tell us what you think. If you’d like to add comments, provide insights, correct a typo, or even ask a question, you can do so directly in the documentation.

NOTE
You must have a Red Hat account and be logged in to the customer portal.

To submit documentation feedback from the customer portal, do the following:

1. Select the Multi-page HTML format.
2. Click the Feedback button at the top-right of the document.
3. Highlight the section of text where you want to provide feedback.
4. Click the Add Feedback dialog next to your highlighted text.
5. Enter your feedback in the text box on the right of the page and then click Submit.

We automatically create a tracking issue each time you submit feedback. Open the link that is displayed after you click Submit and start watching the issue or add more comments.

Thank you for the valuable feedback.
CHAPTER 1. INSTALLING THE RED HAT JBOSS CORE SERVICES 2.4.37

The Apache HTTP Server 2.4.37 can be installed using one of the following sections of the installation guide:

- For installation instructions for Red Hat Enterprise Linux systems, see:
  - Installing the JBoss Core Services Apache HTTP Server on Red Hat Enterprise Linux: Archive Installation.
  - Installing the JBoss Core Services Apache HTTP Server on Red Hat Enterprise Linux: RPM Installation.

- For installation instructions for Microsoft Windows systems, see: Installing the JBoss Core Services Apache HTTP Server on Microsoft Windows.
CHAPTER 2. UPGRADING TO THE RED HAT JBOSS CORE SERVICES APACHE HTTP SERVER 2.4.37

For systems where an earlier version of the Red Hat JBoss Core Services Apache HTTP Server was installed from a .zip archive, upgrading to the Apache HTTP Server 2.4.37 requires:

1. Installing the Apache HTTP Server 2.4.37.
2. Setting up the Apache HTTP Server 2.4.37.
3. Removing the earlier version of Apache HTTP Server.

Prerequisites

- Administrative access (Windows Server)
- A system where the Red Hat JBoss Core Services Apache HTTP Server 2.4.29 or earlier was installed from a .zip archive.

Procedure

For systems using the Red Hat JBoss Core Services Apache HTTP Server 2.4.29, the recommended procedure for upgrading to the Apache HTTP Server 2.4.37 is:

1. Shutdown any running instances of Red Hat JBoss Core Services Apache HTTP Server 2.4.29.
2. Backup the Red Hat JBoss Core Services Apache HTTP Server 2.4.29 installation and configuration files.
3. Install the Red Hat JBoss Core Services Apache HTTP Server 2.4.37 using the .zip installation method for the current system (see Additional Resources below).
4. Migrate your configuration from the Red Hat JBoss Core Services Apache HTTP Server version 2.4.29 to version 2.4.37.

NOTE

The Apache HTTP Server configuration files may have changed since the Apache HTTP Server 2.4.29 release. It is recommended that you update the 2.4.37 version configuration files, rather than overwrite them with the configuration files from a different version (such as the Apache HTTP Server 2.4.29).

5. Remove the Red Hat JBoss Core Services Apache HTTP Server 2.4.29 root directory.

Additional Resources

- Installing the JBoss Core Services Apache HTTP Server on Microsoft Windows.
CHAPTER 3. SECURITY FIXES

This update includes the following security fixes:

<table>
<thead>
<tr>
<th>ID</th>
<th>Impact</th>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>CVE-2021-40438</td>
<td>Important</td>
<td>httpd: mod_proxy: SSRF via a crafted request uri-path containing &quot;unix:&quot; [jbecs-httpd-2.4]</td>
</tr>
</tbody>
</table>
CHAPTER 4. RESOLVED ISSUES

There are no resolved issues for this release.
CHAPTER 5. KNOWN ISSUES

There are no known issues for this release.
CHAPTER 6. UPGRADED COMPONENTS

There are no upgraded components in this release.

For a full list of components that are supported in this release of Red Hat JBoss Core Services, see the Core Services Apache HTTP Server Component Details page. Before you attempt to access the Component Details page, you must ensure that you have an active Red Hat subscription and you are logged in to the Red Hat Customer Portal.
