## PREFACE

Configure user access in Automation Hub to provide the appropriate level of system permissions to groups in your organization.

# CHAPTER 1. CONFIGURING USER ACCESS FOR YOUR LOCAL AUTOMATION HUB

## 1.1. ABOUT USER ACCESS

You can manage user access to content and features in Automation Hub by creating groups of users that have specific permissions.

### 1.1.1. How to implement user access

User access is based on managing permissions to system objects (users, groups, namespaces) rather than by assigning permissions individually to specific users.

You assign permissions to the groups you create. You can then assign users to these groups. This means that each user in a group has the permissions assigned to that group.

Groups created in Automation Hub can range from system administrators responsible for governing internal collections, configuring user access, and repository management to groups with access to organize and upload internally developed content to Automation Hub.

- See [Automation Hub permissions](#) for information on system permissions.

### 1.1.2. Default user access

When you install Automation hub, the default **admin** user is created in the **Admin** group. This group is assigned all permissions in the system.

### 1.1.3. Getting started

Log in to your local Automation Hub using credentials for the **admin** user configured during installation.

The following sections describe the workflows associated with organizing your users who will access Automation Hub and providing them with required permissions to reach their goals. See the permissions reference table for a full list and description of all permissions available.

## 1.2. CREATING A NEW GROUP

You can create and assign permissions to a group in Automation Hub that enables users to access specified features in the system. By default, there is an **admins** group in Automation Hub that has all permissions assigned and is available on initial login with credentials created when installing Automation Hub.

### Prerequisites

- You have **groups** permissions and can create and manage group configuration and access in Automation Hub. See [Automation Hub permissions](#) for information on system permissions.

### Procedure

1. Log in to your local Automation Hub.
2. Navigate to **Groups**.

3. Click **Create**.
4. Provide a **Name** and click **Create**.

You can now assign permissions and add users on the new group edit page.

## 1.3. ASSIGNING PERMISSIONS TO GROUPS

You can assign permissions to groups in Automation Hub that enable users to access specific features in the system. By default, new groups do not have any assigned permissions. You can add permissions upon initial group creation or edit an existing group to add or remove permissions

### Prerequisites

- You have **Change group** permissions and can edit group permissions in Automation Hub. See [Automation Hub permissions](#) for information on system permissions.

### Procedure

1. Log in to your local Automation Hub.
2. Navigate to **Groups**.
3. Click on a group name.
4. Click **Edit**.
5. Click in the field for the permission type and select permissions that appear in the list.
6. Click **Save** when finished assigning permissions.

The group can now access features in Automation Hub associated the their assigned permissions.

## 1.4. CREATING A NEW USER

You can create a user in Automation Hub and add them to groups that can access features in the system associated by the level of assigned permissions.

### Prerequisites

- You have **user** permissions and can create users in Automation Hub. See [Automation Hub permissions](#) for information on system permissions.

### Procedure

1. Log in to your local Automation Hub.
2. Navigate to **Users**.
3. Click **Create user**.
4. Provide information in each of the fields. **Username** and **Password** are required.
5. [Optional] Assign the user to a group by clicking in the **Groups** field and selecting from the list of groups.

6. Click **Save**.

The new user will now appear in the list on the **Users** page.

## 1.5. ADDING USERS TO GROUPS

You can add users to groups when creating a group or manually add users to existing groups. This section describes how to add users to an existing group.

### Prerequisites

- You have **groups** permissions and can create and manage group configuration and access in Automation Hub. See [Automation Hub permissions](#) for information on system permissions.

### Procedure

1. Log in to Automation Hub
2. Navigate to **Groups**.
3. Click the **Users** tab.
4. Click **Add**.
5. Select users to add from the list and click **Add**.

You have now added the users you selected to the group. These users now have permissions to use Automation Hub assigned to the group.

## 1.6. CREATING A NEW GROUP FOR CONTENT CURATORS

You can create a new group in Automation Hub designed to support content curation in your organization who will contribute internally developed collections for publication in Automation Hub.

In this section you will create a new group and assign the required permissions to help content developers create namespaces and upload their collections to Automation Hub.

### Prerequisites

- You have **admin** permissions in Automation Hub and create groups.

### Procedure

1. Log in to your local Automation Hub.
2. Navigate to **Groups** and click **Create**.
3. Enter **Content Engineering** as a **Name** for the group in the modal and click **Create**. The new group is created and the **Groups** page will appear.
4. On the **Permissions** tab, click **Edit**.
5. Under **Namespaces** add permissions for **Add Namespace**, **Upload to Namespace** and **Change Namespace**.

6. Click **Save**.  
The new group is created with the permissions you assigned. Next you can add users to the group.
7. Click the **Users** tab on the **Groups** page.
8. Click **Add**.
9. Select users from the modal and click **Add**.

## Conclusion

You now have a new group who can use Automation Hub to:

- create a namespace,
- edit the namespace details and resources page
- upload internally developed collections to the namespace.

## 1.7. AUTOMATION HUB PERMISSIONS

Permissions provide a defined set of actions each group performs on a given object. Determine the required level of access for your groups based on the following permissions:

**Table 1.1. Permissions Reference Table**

Object	Permission	Description
<b>namespace</b>	Add namespace Upload to namespace Change namespace	Groups with these permissions can create a namespace and upload collections to a namespace.
<b>collections</b>	Modify Ansible repo content	Groups with this permission can move content between repositories using the Approval feature. Certify or reject features to move content from the <b>staging</b> to <b>published</b> or <b>rejected</b> repositories.
<b>user</b>	View user Delete user Add user Change user	Groups with these permissions can manage user configuration and access in Automation Hub.
<b>groups</b>	View group Delete group Add group Change group	Groups with these permissions can manage group configuration and access in Automation Hub.

Object	Permission	Description
remotes	Change collection remote View collection remote	Groups with these permissions can configure remote repository syncing from <b>Community *</b> or <b>RH Certified</b> sources under <b>Repo Management</b> .

## CHAPTER 2. CONCLUSION

Following the procedure above, you can:

- Create a group and add permissions to it;
- Create users;
- Add those users to your groups.
