CHAPTER 1. INSTALLATION PREREQUISITES

Abstract

Before attempting to install and use Red Hat JBoss Fuse, make sure your system meets the minimum requirements.

SUPPORTED PLATFORMS

Red Hat tests and supports Fuse products on the platforms listed at [Red Hat JBoss Fuse Supported Configurations](#).

JAVA RUNTIME

Fuse runtime platforms need [Java 6](#), JRE 1.6.0_18 or later.

To develop applications for Fuse runtime platforms, you need Java 6, JDK 1.6.0_18 or later.

NOTE

Fuse products are *only* guaranteed to run with Java runtimes distributed by, or OEMed from, Red Hat (OpenJDK), Oracle and IBM.

NOTE

On Red Hat-derived Linux systems, `gcj` is the default Java distribution. In these cases, you must download and install an Oracle Java runtime and set the `JAVA_HOME` environment variable. You can also integrate the Oracle Java runtime into the `alternatives(1)` system. See the `alternatives(1)` man page for details.

WARNING

Do *not* install the Java runtime under a directory path that includes whitespace. For example, the path, `C:\Program Files\Java\jre7`, is not an acceptable install path and will lead to unpredictable errors in Red Hat JBoss Fuse at run time.

HARDWARE REQUIREMENTS

The minimum hardware specifications for installing and starting up Red Hat JBoss Fuse are:

- Minimum Installation
 - 90 MB free disk space
 - 2 GB RAM
- Medium Installation

- 355 MB free disk space
- 2 GB RAM
- Full Installation
 - 720 MB free disk space
 - 2 GB RAM

In addition to the disk space required for installing and starting up the base installation the first time, a running system will require space for caching, persistent message stores, and other functions.

CHAPTER 2. INSTALLATION TYPES

Red Hat JBoss Fuse allows you to choose between installations that contain different feature sets:

- Minimal—installs Apache Karaf, Apache Camel core, and selected Apache Camel components
- Medium—installs Apache Karaf, Apache Camel, and Apache ActiveMQ
- Full—installs Apache Karaf, Apache Camel, Apache ActiveMQ Apache CXF, and the JBI components

CHAPTER 3. INSTALLING

Abstract

Red Hat JBoss Fuse is installed by unpacking an archive system on a system. This provides an easy way for a developer to get up and running.

GETTING THE ARCHIVE

You can download the Red Hat JBoss Fuse archive from the [Customer Portal>Downloads>JBoss Enterprise Middleware>Downloads](#) page. After logging in, go to the sidebar menu under JBoss Enterprise Platforms and select *Fuse*. Click the **Download** button next to the product that you want to download.

NOTE

Trial kits are also available from the developer Web site, at <http://jboss.org/products/fuse>. *These kits are not supported by Red Hat*

UNPACKING THE ARCHIVE

Red Hat JBoss Fuse is packaged as a `.zip` file. Using a suitable archive tool, such as **Zip**, unpack Red Hat JBoss Fuse into a directory to which you have full access.

WARNING

Do not unpack the archive file into a folder that has spaces in its path name. For example, do not unpack into `C:\Documents and Settings\Greco Roman\Desktop\fusesrc`.

CHAPTER 4. ADDING A REMOTE CONSOLE USER

Abstract

The server's remote command console is not configured with a default user. Before you can connect to the server's console remotely, you must add a user to the configuration.

IMPORTANT

The information in this file is unencrypted so it is not suitable for environments that require strict security.

To add a user:

1. Open *InstallDir/etc/users.properties* in your favorite text editor.
2. Locate the line `#admin=admin, admin`.

This line specifies a user `admin` with the password `admin` and the role `admin`.

3. Remove the leading `#` to uncomment the line.
4. Replace the first `admin` with a name for the user.
5. Replace `admin` with the password for the user.
6. Leave the last `admin` as is, and save the changes.
7. To access the container's JMX port and to use the ActiveMQ Web console, you must specify the credentials for them. To do so, open *InstallDir/etc/system.properties* in your favorite text editor and search for the following lines:

```
#  
# Authentication - must match an entry in users.properties with the  
# admin privilege  
#  
#activemq.jmx.user=admin  
#activemq.jmx.password=admin
```

Uncomment the `activemq.jmx.user=admin` and `activemq.jmx.password=admin` settings (by removing the leading `#`) and change the username and password values to the same username and password values you just defined in the *etc/users.properties* file.

CHAPTER 5. MONITORING FUSE RESOURCES

Abstract

Using Red Hat JBoss Operations Network (JON), you can discover, import, and monitor Red Hat JBoss Fuse.

IMPORTANT

The Fuse Plugin Pack for JBoss ON 3.1.2 is not installed with the JON base distribution. You must download and install it separately after you have installed the JON base distribution.

To install the Fuse Plugin Pack for JBoss ON 3.1.2:

1. Navigate to the Red Hat [Customer Portal>Downloads>JBoss Enterprise Middleware>Downloads](#) page.
2. In the sidebar menu, under JBoss Enterprise Platforms, select *Fuse*.
3. Click **Download** next to JON 3.1.2 Plugin Pack for JBoss Fuse 6.0.0 .
4. Unzip the plugin package (JON-3.1.2-Fuse/jon-plugin-pack-fuse-3.1.2.GA.zip) into the `/installDir/server/` directory.
5. Install the jar files in one of two ways:
 - Hot Deploy
Copy the unpacked jar files into the JBoss Operations Network's `/installDir/server/plugins/` directory. For details, see the [JBoss Operations Network Installation Guide](#).
 - JON Server UI
For details, see the [JBoss Operations Network Installation Guide](#) , or watch the video [Installing JBoss Operations Network - Part 4, Installing JON Agent Plugins](#) .

APPENDIX A. INSTALLING THE APACHE COMPONENTS

Abstract

Red Hat JBoss Fuse includes standard distribution of Apache Camel and Apache CXF in the installation's `extras` directory.

If you simply want to use a standard distribution of Apache Camel or Apache CXF without the OSGi container or Fuse Fabric you can use the archived versions in the installation's `extras` directory.

The following archive files are provided:

Apache Camel

`apache-camel-2.10.0.redhat-60024.zip`

Apache CXF

`apache-cxf-2.6.0.redhat-60024.zip`

You can copy the file to the desired location and decompress it using the appropriate utility for your platform.

WARNING

Do not unpack the archive file into a folder that has spaces in its path name. For example, do not unpack into `C:\Documents and Settings\Greco Roman\Desktop\fusesrc`.
