Abstract

These release notes contain the latest information about new features, enhancements, fixes, and issues contained in the AMQ Interconnect 1.9 release.

Table of Contents

CHAPTER 1. ENHANCEMENTS	3
CHAPTER 2. FIXED ISSUES	4
CHAPTER 3. KNOWN ISSUES	5

CHAPTER 1. ENHANCEMENTS

- **ENTMQIC-2455** - Allow AMQP open properties to be supplemented from connector configuration

With this release you can now add metadata when connecting routers, as described in [Adding metadata to connections](#).

- **ENTMQIC-2448** - Allow defining address prefix shared by different multitenant listeners

With this release a multitenant prefix specified by a vhost policy can be shared among several hostnames with a pattern specified in the aliases parameter as described in [Creating vhost policies](#).

CHAPTER 2. FIXED ISSUES

- **CVE-2020-7656 - jquery: allows XSS via the load method [amq-ic-1]**
The issue has been resolved by updating the jQuery dependency.
- **CVE-2020-11022 - jquery: Cross-site scripting due to improper injQuery.htmlPrefilter method [amq-ic-1]**
The issue has been resolved by updating the jQuery dependency.
- **CVE-2020-11023 - jquery: passing HTML containing <option> elements to manipulation methods could result in untrusted code execution [amq-ic-1]**
The issue has been resolved by updating the jQuery dependency.
- **ENTMQIC-2446 - Router crash with epoll error EPOLL_CTL_DEL**
Previously, the router could crash due to a race condition.

The issue has been resolved.
- **ENTMQIC-2485 - The VhostNamePatterns does not work in OCP env**
Previously, using # in the **hostname** of a vhost policy did not set the policy correctly.

The issue has been fixed.
- **ENTMQIC-2481 - Unable to delete listener with http enabled**
Previously, if you created a listener with **http** set to **true** you could not later delete that listener.

The issue has been fixed.
- **ENTMQIC-2460 - Adding new config address, autolinks and link routes become slower as more get added**
Previously, if you created many addresses the creation of more addresses becomes slow.

The issue has been fixed.

CHAPTER 3. KNOWN ISSUES

- **ENTMQIC-1980 - Symbolic ports in HTTP listeners do not work**

When configuring a listener in the router with the **http** option enabled (for console or WebSocket access), the **port** attribute must be expressed numerically. Symbolic port names do not work with HTTP listeners.

If a listener is configured as:

```
listener {  
  ...  
  port: amqp  
  http: yes  
  ...  
}
```

It should be changed to:

```
listener {  
  ...  
  port: 5672  
  http: yes  
  ...  
}
```
