PREFACE

PROVIDING FEEDBACK ON WORKLOAD AVAILABILITY FOR RED HAT OPENSIFT DOCUMENTATION

We appreciate your feedback on our documentation. Let us know how we can improve it. To do so:

1. Go to the [JIRA](#) website.
2. Enter a descriptive title in the **Summary** field.
3. Enter your suggestion for improvement in the **Description** field. Include links to the relevant parts of the documentation.
4. Enter your username in the **Reporter** field.
5. Enter the affected versions in the **Affects Version/s** field.
6. Click **Create** at the bottom of the dialog.

CHAPTER 1. WORKLOAD AVAILABILITY FOR RED HAT OPENSIFT 23.2 RELEASE NOTES

Workload Availability for Red Hat OpenShift version 23.2 is now available.

1.1. NEW FEATURES AND ENHANCEMENTS

This release adds improvements related to the following components and concepts.

- Node Health Check operator enhancements introduced in Workload Availability for Red Hat OpenShift version 23.2:
 - **escalatingRemediations support.** Previously, the Node Health Check Operator supported only one remediation per configuration. With this release, multiple remediations per configuration are supported. Multiple remediations are sequenced, and executed one after another until remediation succeeds.
 - **Metal3 remediation support.** Previously, the only remediation provider available for Node Health Check was Self Node Remediation. With this release, the new Metal3 remediation provider is also supported. Metal3 remediation is available for OpenShift Container Platform version 4.13 and later versions.
 - **User-specific Custom Resource (CR)** Previously, the default Node Health Check CR was created automatically during installation. With this release, the Node Health Check Operator does not have a default CR. Instead, the user must create a CR corresponding to their requirements.

For more information on these enhancements, see the **Node Health Check** section of the [Workload Availability for Red Hat OpenShift](#) documentation.

1.2. DEPRECATED AND REMOVED FEATURES

No features were deprecated and/or removed in this release.

1.3. BUG FIXES

No notable bugs were fixed in this release.

1.4. TECHNOLOGY PREVIEW FEATURES

There are no new technology preview features in this release.

1.5. KNOWN ISSUES

No known issues were identified in this release.
