

Issues Occurred in the RHEV-M 3.5 HA

The RHEV-M 3.1 software directories get shared for the implementation of RHEV-M (as a highly available service) are as follows:

/usr/share/jasperreports-server-pro
/usr/share/ovirt-engine-dwh
/usr/share/ovirt-engine-reports
/usr/share/ovirt-engine
/var/lib/exports
/var/lib/ovirt-engine
/var/lib/pgsql

Note: These are the directories required to be shared in order to work with active and passive RHEV-M.

Available directories in RHEVM 3.5 software are as follows:

/usr/share/ovirt-engine
/var/lib/exports
/var/lib/ovirt-engine
/var/lib/pgsql

Some of the files mentioned to use for the shared directories are not available in the RHEV-M version 3.5 and replacement of those files also cannot be gathered with the help of source.

Note: There is no source that referring the required directories or files of RHEV-M 3.5 to work with active and passive.

In order to make ovirt logs cluster-safe. On both nodes, it's required to modify /etc/cron.daily/ovirt-cron. This file also not available when installed RHEVM-3.5

Possible Solutions in Progress

Installing RHEV-M using shared directory with available necessary files: **result in progress**

Taking the copy of necessary files to be shared and replaced it in the shared directory: **result in progress**
