

RED HAT INSIGHTS

PREDICTIVE RISK ANALYTICS FOR IT

PREDICTIVE IT ANALYTICS

Gain comprehensive analytics across physical, virtual, container, private and public cloud environments. Know about vulnerabilities before they affect your environment.

AUTOMATED EXPERT ASSESSMENT

Real-time visibility of hybrid environments enables ops teams to identify pending outages and fix things faster.

RAPID TIME TO VALUE

Deploy and scale quickly with no additional infrastructure requirements. Teams can immediately initiate tailored remediation steps to avoid downtime and optimize security.

MINIMIZE HUMAN ERROR

Decrease security threats by providing tailored, easy to follow remediation steps.

FIX PROBLEMS BEFORE THEY OCCUR

PRODUCT OVERVIEW

Predict and prevent problems before they occur in your IT infrastructure with actionable intelligence powered by Red Hat®, the world's leading provider of open source software. As existing workloads evolve, and new deployments grow in size and complexity, risk management is a key challenge and a necessity for enterprise IT. To be successful, operations departments need to employ new environments with lightning speed and ensure those systems scale reliably.

Red Hat Insights provides highly scalable, prescriptive analytics across users' hybrid infrastructure. Based on Red Hat's expertise, and delivered as a SaaS (Software as a Service) offering, Red Hat Insights generates tailored remediations in real time. More than a monitoring system, Insights transforms intelligent data to pinpoint technical risks and enables IT to resolve problems before their business is affected. Insight's updated platform provides operational analytics and functional intelligence across physical, virtual, containers and private and public cloud environments.

BENEFITS

Red Hat Insights provides ongoing, in-depth analysis of your Red Hat infrastructure to proactively identify key threats to security, performance, and stability. Utilizing predictive analytics across your environment extends your visibility and allows IT staff to resolve technical issues before they impact your environment. Proactively tracking the health of your infrastructure with a system powered by Red Hat knowledge allows you to fix problems faster and avoid costly downtime.

For more information about Red Hat Insights, visit access.redhat.com/insights

Fueled by extensive technical knowledge from Red Hat's constantly expanding knowledge base, including more than 100,000 verified solutions to threats and configuration issues, Insights generates a thorough analysis of your complete hardware and software stack. In addition to identifying configuration risks, Red Hat Insights provides clear resolution steps tailored for your specific environment. By combining granular risk assessment and tailored remediation steps, Red Hat Insights moves IT out of reactive mode and toward proactive, smart infrastructure management.

KEY FEATURES

1. Discovery of infrastructure risks on bare-metal, virtual, and container platforms, as well as private and public clouds.
2. Tailored step-by-step resolutions per system to take the guesswork out of remediation.
3. Integrated with Satellite, CloudForms, and Red Hat Customer Portal to easily transition from insight to action.
4. Identify, prioritize, and assign remediation tasks to individual systems or groups enabling faster response times.

SUPPORTED PLATFORMS

- Red Hat Enterprise Linux 6.4+ or 7+
- Red Hat OpenStack 7 and higher
- Red Hat Enterprise Virtualization 3.6 and higher
- All Red Hat container platforms

USE CASES

- Detect security weaknesses and stay ahead of threats on bare-metal, virtual, container, private or public clouds.
- Streamline application performance and maximize system uptime to optimize your IT infrastructure.
- Minimize risk for overwhelmed or understaffed operations team with tailored and verified solutions.
